PROJECTS

Mean Edge — Intraday Trading Simulator (C++17) github.com/chaitu11106-coder/MeanEdge

- Production-grade simulator implementing a **gap-up rejection strategy** built from 3 years of personal market observation and manual trading experience.
- Achieved **sub-millisecond latency** per candle with constant space complexity **O(1)**.
- Capital-based **2% stop-loss / 7% target** risk model; single position, max 2 trades/day, auto **15:00 square-off**.
- Strategy traded manually for years before conversion to an algorithmic engine; broker API pending due to licensing.

ArenaFlow — Real-Time Venue Logistics Platform arena-flow-nine.vercel.app

- Next-generation physical event platform with AI-powered smart crowd routing and real-time coordination.
- Built dedicated **Attendee** and **Operator** portals; engineered live metrics: capacity (**94.2%**), flow rate (**4.8 m/s**), sub-2 s response time.
- Full-stack web app deployed on **Vercel** with a modern frontend and AI-driven logistics engine.
